

BD Horizon V450 Reagents

Violet Laser Reagents

Features

Delivers improved performance on flow cytometers equipped with violet lasers

Available in a broad portfolio of reagents to maximize flexibility for multicolor panel design

Optimized to be compatible with other BD reagents used on BD FACS brand flow cytometers

Figure 1. Spectral overlay comparison of BD Horizon V450 and Pacific Blue™

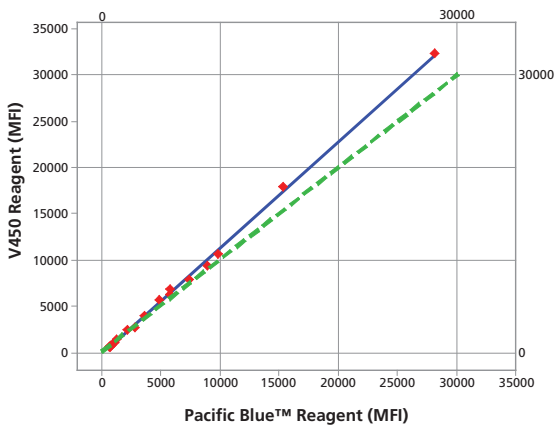

Figure 2: Comparison of fluorescence intensities of BD Horizon V450 and Pacific Blue™ reagents. Human peripheral blood cells were stained with 18 matched pairs of BD Horizon V450 and Pacific Blue™ reagents (eg, BD Horizon V450 labeled anti-human CD8 vs. Pacific Blue™ labeled anti-human CD8). The conjugates were F/P ratio matched and tested using whole blood and the lyse/wash method. The corresponding median fluorescence intensity (MFI) of the positive cells for each reagent pair was measured and plotted as shown. The green dashed line represents the theoretical MFI ratio (slope = 1.0) for reagents of equivalent brightness. The blue line shows the linear regression (slope = 1.15) of the 18 reagent pairs. The data shows that while there might be variation due to individual clones (see Table 1), on average the BD Horizon V450 reagents are 15% brighter than the corresponding Pacific Blue™ reagents.

BD Horizon™ V450 reagents are high-quality antibody conjugates designed to deliver exceptional performance on BD FACST™ brand flow cytometers equipped with violet lasers. The first in a series of new fluorochromes from BD Biosciences, these reagents are engineered to deliver high sensitivity and consistent results.

A broad portfolio of BD Horizon V450 conjugates is available, maximizing choice and flexibility for multicolor panel design. Offering exceptional performance and compatibility, BD Horizon V450 reagents, together with online tools and resources from BD Biosciences, make the power of multicolor flow cytometry more accessible to researchers than ever before.

Optimized for the violet laser

BD Horizon V450 reagents are engineered for use with BD FACS brand flow cytometers equipped with violet lasers, including BD FACSCanto™, BD FACSAria™, and the BD™ LSR cell analyzer family line. When used with these instruments, BD Horizon V450 reagents demonstrate improved spectral characteristics as compared to Pacific Blue™ reagents (Figure 1), with a maximum absorption of 404 nm and an emission peak of 448 nm. Additionally, many BD Horizon V450 reagents exhibit improved performance compared to Pacific Blue™ reagents as measured by median fluorescence intensity (MFI) and normalized signal to noise (stain index) (Figure 2, Table 1).

Wide portfolio of conjugates, multiple sizes

BD Horizon V450 reagents are available in a broad array of clones. Multiple sizes address a range of requirements from small test sizes for multicolor panel design to 120-test sizes needed for high-throughput experiments. Bulk sizes and special packaging options are also available.

Tools to optimize setup, selection, and performance

Multicolor flow cytometry enables simultaneous analysis of multiple parameters in a single experiment and can quickly deliver a wealth of information about cellular composition and function.

To help advance the use of multicolor flow cytometry, BD Biosciences offers a growing library of tools and resources relevant to both experienced researchers and those new to multicolor panel design. In addition to these online resources, BD Biosciences offers one-on-one technical application support as part of our comprehensive customer services. Every day around the world, BD flow cytometry experts help customers on the phone and on-site to address a range of multicolor questions from panel design to troubleshooting.

* Tested on granulocytes ** Tested on monocytes

Table 1: Stain index comparison between BD Horizon V450 and Pacific Blue™ reagents across several antibody clones.

F/P matched conjugates of both BD Horizon V450 and Pacific Blue™ were tested on whole blood using the lyse/wash method with BD PharmLyse™ lysing buffer (Cat. No. 555899) and run on a BD LSR II system equipped with a violet laser and a 450/50 filter. Comparative stain indices between BD Horizon V450 and Pacific Blue™ were calculated to assess relative brightness of the two fluorophores. The comparison revealed that BD Horizon V450 is generally brighter than Pacific Blue™ across the tested specificities.

BD Horizon V450 RUO (GMP) Reagents

Description	React.	Clone	Isotype	Size	Cat. No.
CD2	Hu	S5.2	Ms IgG _{2a} κ	100 tests	644485
