

BD LSRFortessa™ Cell Analyzer

Technical Specifications

The BD LSRFortessa™ cell analyzer puts the power of the BD LSR platform into a compact footprint. It can easily fit on the benchtop for more cost-effective space utilization.

The instrument delivers the optimal sensitivity and resolution required for multicolor applications. The BD LSRFortessa cell analyzer can be used to detect up to 18 colors simultaneously and supports up to 4 lasers, and is upgradeable to 7 lasers through the special order program. In addition to the reduced size, design innovations make filters and detectors more accessible for easier setup of new experiments.

Through the BD special order program, customers can upgrade the BD LSRFortessa to support more lasers, choosing from 16 different wavelengths and a wide range of powers. This flexibility allows users to configure the instrument to meet their exact requirements for advanced assay development.

Emission optics

Optical coupling

The quartz cuvette flow cell is gel-coupled by refractive index-matching optical gel to the fluorescence objective lens (1.2 NA) for optimal collection efficiency.

Forward scatter detection

Photodiode detector with a 488/10 bandpass filter

Side scatter detector

Photomultiplier tube (PMT) with a 488/10 bandpass filter

Emission optical design

Emitted light from the gel-coupled cuvette is delivered by fiber optics to the detector arrays. The BD LSRFortessa uses BD's patented octagon- and trigon-shaped optical pathways that use signal reflection to maximize signal detection. Please see the separate filter guide for information on dye and filter options.
